Education

Drexel University

Bachelor of Science in Computer Science, Minor in Linguistics

Sep 2024 – Expected Jun 2029

Experience

Software Engineer Co-op

eMoney Advisor

Radnor, PA

Sep 2025 – Mar 2026

- Delivered production features and resolved technical debt in a 1.3M+ LOC .NET codebase supporting integrations with 12,000+ financial institutions
- Partnered with senior engineers to develop and deploy eMoney's Rocket Mortgage integration to production
- Implemented NUnit test suites to catch regressions and stabilize production releases while following TDD practices
- Traced and corrected a partner API change that triggered a spike in client-facing errors using Elasticsearch and Kibana
- Orchestrated production deployments through Jenkins and Octopus within CI/CD pipelines

Full-stack Developer

The Triangle - Drexel University Student Newspaper

Philadelphia, PA

May 2025 – Present

- Leading migration from WordPress to a custom CMS and database architecture, enabling scalable publishing and full platform ownership
- Building a headless CMS in Go to replace WordPress and provide scalable content management through a REST API
- Constructed a Python ETL pipeline to migrate 11+ years of WordPress data (18k+ articles, 5k+ authors) into MariaDB, preserving data continuity despite upstream failures
- Developed a MinHash-based entity resolution system using NumPy and Numba, reducing duplicate records and improving dataset integrity in production

Projects

Minhashlib

github.com/ssavutu/minhashlib [🔗](#)

- Released an MIT-licensed MinHash similarity detection Python library for large string datasets
- Achieved 6x CPU benchmark speedup over datasketch while maintaining comparable accuracy
- Accelerated signature generation through vectorization and JIT compilation using Numba
- Integrated the library into a production-critical ETL pipeline at The Triangle

EagleEyePhilly

github.com/ssavutu/EagleEyePhilly [🔗](#)

- Built a FastAPI service backed by Selenium automation during a hackathon to expose Philadelphia 311 workflows through a programmable API
- Deployed a demo-ready backend from a local machine via Cloudflare Tunnel for live end-to-end demos
- Authored GitHub Wiki API documentation and coached teammates on HTTP request design, testing, and debugging
- Partnered on Gemini integration to support one-shot situational analysis and resolved cross-team backend integration issues

DragonFuel

github.com/ssavutu/DragonFuel [🔗](#)

- Created a multipage nutrition tracking app using the Flutter UI framework
- Assembled a Python scraping pipeline using Selenium and BeautifulSoup to aggregate nutritional data
- Designed a local data layer using SQLite and JSON to support persistent, real-time application state

RxBuddy

github.com/ssavutu/RxBuddy [🔗](#)

- Prototyped a Flutter-based medication reminder MVP within a 24-hour hackathon
- Exposed a REST API via Flask enabling real-time image and JSON data exchange
- Leveraged Gemini API to extract and interpret text from prescription labels

Skills

Languages: Python, Go, C#, SQL, JavaScript, TypeScript, Java, C++, Dart, HTML, CSS

Technologies: .NET, Flask, FastAPI, NUnit, Selenium, React, Flutter, MariaDB, SQLite, NumPy, Numba, BeautifulSoup

Tools: Git, GitHub, Linux, Docker, Jenkins, Octopus, Jira, Confluence, Elasticsearch, Kibana, Bitbucket
