## Education

### Drexel University

*Bachelor of Science in Computer Science, Minor in Linguistics*

*Sep 2024 – Expected Jun 2029*

## Experience

### Software Engineer Co-op

*eMoney Advisor*

*Radnor, PA*

*Sep 2025 – Mar 2026*

- Delivered production features and reduced technical debt in a 1.3M+ LOC .NET codebase supporting integrations with 12,000+ financial institutions
- Traced and corrected a partner API change that caused a spike in client-facing errors using Elasticsearch and Kibana
- Collaborated with senior engineers to develop and deploy eMoney's Rocket Mortgage integration to production
- Implemented NUnit test suites to catch regressions and stabilize production releases, following TDD practices
- Orchestrated production deployments using Jenkins and Octopus within CI/CD pipelines

### Full-stack Developer

*The Triangle - Drexel University Student Newspaper*

*Philadelphia, PA*

*May 2025 – Present*

- Leading migration from WordPress to a custom CMS and database architecture to enable scalable publishing and full platform ownership
- Building a headless CMS in Go to replace WordPress and provide scalable content management via a REST API
- Built a Python ETL pipeline to migrate 11+ years of WordPress data (18k+ articles, 5k+ authors) into MariaDB, preserving data continuity despite upstream failures
- Developed a MinHash-based entity resolution system using NumPy and Numba to reduce duplicate records and improve dataset integrity in production

## Projects

### Minhashlib

[github.com/ssavutu/minhashlib](https://github.com/ssavutu/minhashlib) 

- Released an MIT-licensed Python library for MinHash-based similarity detection on large string datasets
- Achieved a 6× CPU speedup over the datasketch library while maintaining comparable accuracy
- Accelerated signature generation through vectorization and JIT compilation using Numba
- Integrated the library into a production ETL pipeline at The Triangle

### EagleEyePhilly

[github.com/ssavutu/EagleEyePhilly](https://github.com/ssavutu/EagleEyePhilly) 

- Built a FastAPI service backed by Selenium automation during a hackathon to expose Philadelphia 311 workflows via a programmable API
- Deployed a demo-ready backend via Cloudflare Tunnel from a local machine for live end-to-end demos
- Authored GitHub Wiki API documentation and coached teammates on HTTP request design, testing, and debugging
- Partnered on Gemini integration to support one-shot situational analysis and resolved cross-team backend integration issues

### DragonFuel

[github.com/ssavutu/DragonFuel](https://github.com/ssavutu/DragonFuel) 

- Created a multipage nutrition tracking app using the Flutter UI framework
- Assembled a Python scraping pipeline using Selenium and BeautifulSoup to aggregate nutritional data
- Designed a local data layer using SQLite and JSON to support persistent, real-time application state

### RxBuddy

[github.com/ssavutu/RxBuddy](https://github.com/ssavutu/RxBuddy) 

- Prototyped a Flutter-based medication reminder MVP within a 24-hour hackathon
- Exposed a REST API via Flask enabling real-time image and JSON data exchange
- Leveraged Gemini API to extract and interpret text from prescription labels

## Skills

**Languages:** Python, Go, C#, SQL, JavaScript, TypeScript, Java, C++, Dart, HTML, CSS

**Technologies:** .NET, Flask, FastAPI, NUnit, Selenium, React, Flutter, MariaDB, SQLite, NumPy, Numba, BeautifulSoup

**Tools:** Git, GitHub, Linux, Docker, Jenkins, Octopus, Jira, Confluence, Elasticsearch, Kibana, Bitbucket
